PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science student with hands-on experience building distributed systems, scalable backend services, and AI-powered applications using Python, Java, FastAPI, Docker, and cloud platforms. Experienced in developing containerized microservices, real-time inference pipelines, and API-driven systems with strong foundations in Data Structures & Algorithms, Operating Systems, DBMS, and Computer Networks.

EDUCATION

Amrita Vishwa Vidyapeetham

Bachelor of Technology in Computer Science and Engineering

- CGPA: 7.24 / 10.0 (up to 6th semester)

Coimbatore, India

Aug 2023 – Present

EXPERIENCE

AI/ML Intern

DRDL, DRDO

April 2026 – May 2026

Hyderabad, India

- Built a Retrieval-Augmented Generation (RAG) pipeline for scientific claim verification using dense, BM25, hybrid, and query-reformulation retrieval strategies.
- Developed automated benchmarking workflows to evaluate transformer-based NLP systems across multiple retrieval and prompting configurations.
- Conducted comparative evaluation of transformer models including DistilBERT, RoBERTa, and BART-large for zero-shot scientific claim classification.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript

Backend & APIs: FastAPI, Spring Boot, Node.js, Express.js

DevOps & Cloud: Docker, Kubernetes, AWS, Azure, Git

Databases: PostgreSQL, MySQL, MongoDB

Frontend: React.js

PROJECTS

DocPulseAI – Code Intelligence Platform | *React.js, Node.js, Express.js, FastAPI, Docker, Azure*

Mar 2026

- Built a scalable repository intelligence platform using AST-based analysis (Tree-sitter) to extract APIs, entities, and dependency relationships from large codebases.
- Developed backend microservices and API-driven workflows for repository analysis, metadata extraction, and dependency processing.
- Deployed a containerized microservices architecture on Azure using ACA, ACR, Blob Storage, and PostgreSQL.

Edge Co-Intelligence System | *Python, FastAPI, Docker, YOLOv8*

Feb 2026

- Built a distributed edge inference system that parallelized YOLOv8 object detection workloads across multiple worker nodes for low-latency processing.
- Designed a fault-tolerant pipeline with load balancing, retry handling, asynchronous task coordination, and worker health monitoring.
- Implemented real-time inference streaming and scalable aggregation for distributed object detection workflows.

Quizora – Online Assessment Platform | *Java, Spring Boot, MySQL, JWT*

Nov 2025

- Developed a stateless REST API using Spring Boot and MySQL to manage the assessment lifecycle with transactional quiz distribution and automated grading.
- Secured APIs using Spring Security and JWT, implementing RBAC for faculty and student access control.

INTERESTS

Data Structures & Algorithms, Backend Development, Cloud Computing
